MUTATIONS

MUTATIONS

Sudden small changes in the DNA code of genes which are passed on to an organism's offspring

“It must not be forgotten that mutation is the ultimate source of all genetic variation found in natural populations & the only new material available for natural selection to work.”

Ernst Mayr

TRANSITIONAL FORMS

?????

“It remains true to say that we know of no way other than **random mutation by which new hereditary variation comes into being, nor any process other than natural selection by which the hereditary constitution changes from one generation to the next.”**

CH Maddington

MUTATIONS

1. Rare
2. Unpredictable
3. Harmful

Abby & Brittany Hensel

**“Most mutations are bad.
In fact, good ones are so rare
we can consider them all
bad.”**

“In any case, no real evolutionist, whether gradualist or punctuationist, uses the fossil record as **evidence in favor of the theory of evolution as opposed to special creation.”**

Mark Ridley

“The absence of fossil evidence for intermediary stages between major transitions in organic design, indeed our inability, even in our imagination, to construct functional intermediates in many cases, has been a persistent & nagging problem for gradualistic accounts of evolution.”

Steven Jay Gould
